SKILLS React / Redux, Python, JavaScript, PostgreSQL, HTML5, Docker, CSS3, Git

PROJECTS

Scouttit (JavaScript, Python, HTML5, CSS3)

[Live Site](#) | [Github](#)

Project Description

- Produced Reddit inspired web Application using Python, React / Redux, Javascript, PostgreSQL & Node.js.
- Created PSQL database with 5 tables to allow users to add threads to categories, add reviews to threads, and up/downvote threads.
- Expanded an already existing database to implement additional features.
- Optimized redux code improving efficiency of the web application data, limiting the store to only essential information.

Instructables (JavaScript, Python, HTML5, CSS3)

[Live Site](#) | [Github](#)

Project Description

- Worked alongside other AA students as a team to create a step-by-step teaching website inspired by Instructables.
- Created PSQL database with 5 tables to allow users to add projects, add steps to projects, and review projects.
- Gained valuable experience managing a github repository with branches using issues and projects.

BadReads (JavaScript, Express, HTML5, CSS3)

[Live Site](#) | [Github](#)

Project Description

- Collaborated alongside other AA students as a team to create a recipe website inspired by Goodreads.
- Created PSQL database with 8 tables to allow users to add bookshelves, add books to shelves, and rate/review books.
- Restricted access to user specific site features, while maintaining non-user capabilities to view the website.
- Gained valuable experience managing a github repository with branches and merge conflicts.

Whelpp (JavaScript, Express, React, Redux, CSS3, Webpack, PostgreSQL)

[Live Site](#) | [Github](#)

Project description

- Produced Yelp inspired webApplication using React / Redux, Javascript, Express, PostgreSQL, & Node.js.
- Built a backend database for application, displayed stored backend information on the webpage, and implemented a review section with full CRUD functionality that is scalable for any future app that is added to the database.
